

- The lab processing for 20MM Survey 3 has been delayed due to problems with the waste water system.

- Delta temperatures have climbed somewhat (17.2-17.8C) since last week and may be above optimal spawning range. A new storm expected later this week may bring the temperatures down.

- Light traps set last week at Decker and Three-mile slough did not collect delta smelt. Light traps outside of the Clifton Court did collect a few smelt larvae
